

C09-EE-105

3037

BOARD DIPLOMA EXAMINATION, (C-09)

MARCH/APRIL—2017

DEEE—FIRST YEAR EXAMINATION

BASIC ELECTRICAL ENGINEERING

Time : 3 hours]

[Total Marks : 80

PART—A

3×10=30

- Instructions** : (1) Answer **all** questions.
(2) Each question carries **three** marks.
(3) Answers should be brief and straight to the point and shall not exceed *five* simple sentences.

1. State and explain Ohm's Law. 3
2. Define the terms (a) 'specific resistance' and (b) 'conductivity'.
1½+1½=3
3. Distinguish between (a) copper and (b) aluminium in three aspects. 3
4. Compare magnetic circuit with electric circuit in any three aspects. 3
5. State Lenz's law, and explain the Fleming's right-hand rule.
1½+1½=3
6. State Faraday's laws of electromagnetic induction. 1½+1½=3
7. State and explain Gauss theorem. 1½+1½=3
8. Explain any three factors that affect the insulating resistance.
1+1+1=3

* 9. State the bi-metals. 1+1+1=3

10. State the different transistor configurations. 1+1+1=3

PART—B 10×5=50

Instructions : (1) Answer *any five* questions.
(2) Each question carries **ten** marks.
(3) Answers should be comprehensive and the criterion for valuation is the content but not the length of the answer.

11. (a) Deduce the relation $R \propto l/a$.
(b) Determine the resistance of a 600 m length of aluminium conductor whose rectangular cross-section is 6 cm and 3 cm. Take $2.826 \times 10^{-8} \Omega\text{-m}$. 4+6=10

12. (a) State the requirements of high-resistivity materials. 5
(b) Briefly explain the process of galvanizing and impregnation. $2\frac{1}{2}+2\frac{1}{2}=5$

13. (a) Explain the mechanical equivalent of heat.
(b) An electric kettle is marked 500 W, 230 V and is found to take 20 minutes to raise 1 kg of water from 15 °C to boiling point. Calculate the efficiency of the kettle. 5+5=10

14. (a) State the Fleming's left-hand rule.
(b) Develop the expression for the force between two parallel current carrying conductors. 2+8=10

15. Derive the expressions for self- and mutual inductances. 5+5=10

- * **16.** (a) Derive the equivalent capacitance for three capacitors connected in series. 5+5=10
- (b) Three capacitors having capacitances of 10 F, 30 F and 90 F are connected in parallel across 220 V DC. Find the equivalent capacitance and the charge on each capacitor.
- 17.** Explain the properties and applications of PVC. 5+5=10
- 18.** (a) Distinguish between *P*-type and *N*-type semiconductors. 4+6=10
- (b) Explain the operation of Zener diode.
