

Instructions : (1) Answer all questions.

- (2) Each question carries three marks.
- (3) Answers should be brief and straight to the point and shall not exceed *five* simple sentences.
- **1.** Write the dimensional formulae for the following physical quantities :
  - (a) Force
  - (b) Power
  - c) Stress

State triangle law of vectors.

A stone is dropped from a balloon ascending with uniform vertical velocity of  $23 \cdot 2$  m/s and reaches the ground in 10 s. Find the height of the balloon when the stone reaches the ground. Take the value of *q* as  $9 \cdot 8$  m/s<sup>2</sup>.

**4.** A particle is performing SHM with an amplitude of 0.5 m and has an angular velocity 1000 rad/s. Find its velocity at a distance 0.3 m from the mean position.

- **5.** Define two molar specific heats of a gas.
- 6. Define echo and give two applications.
- 7. Define Hooke's law and angle of contact.
- ERU, KRISHNADIST, A.P. Write Newton's formula for viscous force. Name the symbols. 8.
- Define specific resistance and conductance. 9.
- **10.** Write any three applications of photoelectric effect.

**Instructions** : (1) Answer any **five** questions.

(a) Explain methods of reducing friction.

- (2) Each question carries **ten** marks.
- (3) Answers should be comprehensive and the criterion for valuation is the content but not the length of the answer.

## 11. (a) Define vector produce and write properties of vector product.

- (b) Two vectors are aj 3k and Зi i k В each other. Calculate the value of perpendicular to constant a
- 12. (a) Show that the path is parabola in the case of body projected horizontally from the top of a tower.
  - An object is thrown vertically up with initial velocity 39·2 m/s.

- (b) Derive expression for acceleration of a body, sliding down on smooth inclined plane. 6
- 14. (a) State the law of conservation of energy and prove it in the case of a freely falling body.
  - (b) If the mass of a body is reduced to half and velocity is doubled, how does its KE change?
